N Number in sample. See data documentation.

+/- Confidence interval. See data documentation.

* Number of households was estimated by the Bureau of Health Information and Policy. See data documentation.

Note: "Food insecurity" is limited or uncertain availability of nutritionally adequate and safe foods or limited or uncertain ability to acquire acceptable foods in socially acceptable ways. "Hunger" is involuntary hunger that results from not being able to afford enough food. People are not counted as "hungry" for these statistics if they were hungry only because they were dieting to lose weight, fasting for religious reasons, or were just too busy to eat.
